# Invicta, European leader in wood burners

## Guaranteed French-origin cast iron

Invicta's foundry and enamelling plant was established in 1924 in Donchery, in the Champagne-Ardenne region of France. With an annual production of 115,000 wood burning stoves, the group is one of the first European manufacturers. Invicta controls the entire manufacturing process internally: Research & Design, test laboratory, Foundry, Enamelling, Marketing & Distribution. The cast-iron woodburners, inset stoves and cassette stoves manufactured by Invicta are certified Origine France Garantie (Bureau Veritas, certificate of conformity N ° 7208672).

## The benchmark brand

Over the years and through its original and creative communication campaigns, Invicta has become the benchmark brand in the wood-burning stove sector. It offers a wide range of products and services, enabling everyone to find a heating solution that meets their expectations in terms of experience, design, comfort and performance. Invicta is therefore the ideal partner for warm moments.

## A wide range of expertise

Invicta's know-how extends to multiple sectors: woodburners, hybrid freestanding stoves, pellet stoves, inset stoves and cassette stoves, but also barbecues, culinary pottery, decorative items and furniture.

## Research and innovation

Optimising, innovating and revolutionising are the three watchwords at Invicta's R&D division. Some innovations conceived by Invicta, like the post combustion system like the post combustion system, have greatly contributed to the optimisation of energy performance. Others, such as the Air-control technology, improve the user experience by providing better control of the burn rate. Day after day our R&D team keeps on developing eco-friendly products to care more for you.

## An ecofriendly approach

Invicta constantly improves the energy performance of its woodburners, set in motion by creation of the french Flamme verte label. The 7 star rating established in January 2015 encourages companies to manufacture environmentally friendly products.

Our laboratory conducts systematic quantitative tests (performance, CO rate, dust concentration) on new models. All of Invicta's wood burners carry the European Eco Label A or A+. Many are compatible with European Eco-Design 2022 standards. Most of our products are Flamme verte 7 stars. Invicta's ISO 14001 certification is our commitment to protect the environment.

## Partner of Ademe [www.ademe.fr](http://www.ademe.fr)

Initiated by ADEME, a programme to study and measure emissions generated by the use of biomass, was established to evaluate the nature and quantity of gaseous pollutants, as well as their particle size and residual particle distribution. This programme aims to improve combustion involving scientists from the Management of Risk and the Environment Laboratory of the University of Haute-Alsace and Invicta. This research is part of the Invicta DNA, and therefore Invicta's Research and Development team is very dedicated.

# Great Design, for Everyone.

Known as trend-setter, Invieta revisited wood burning stoves and inset stoves, developing new, cleaner product lines bringing you design, with a modern twist. This vision combines sleek design with affordability, perfectly in tune with time. Invieta's approach is part of what has come to be known as «democratic design».

This approach is based on five pillars:

**Form** : it is the quality of the line, the sketch, that makes the stove a complete aesthetic object. It adds style to any home. The stove becomes the heart of the home, and the central decorative element. This is obviously the most common meaning of the word design.

**Function:** Invieta stoves and inset stoves are perfectly designed, not only in its aesthetic dimensions, but also in its functionality. Performance, efficiency and usability are guaranteed. And they're

ergonomic, that is to say, optimised for a natural and intuitive use.

**Quality** : while remaining accessible, Invieta wood burning stoves and inset stoves have a level of quality that is recognized worldwide. They are made in France, in the Ardennes. The quality level is controlled at every stage to achieve the hardest standards.

**Sustainability** : from stove's conception, Invieta designers never lose sight of the sustainability of the appliance throughout its life cycle. The materials are recyclable, and the fuel is the most abundant source of renewable energy in France. Durability is an integral part of the design.

**And evidently the price.**

## Heat control

For almost a century, Invieta has been learning every day how to better tame the heat.

First of all, this involves optimising the wood burning chamber: the ideal proportions are passed down by Iron-masters through word of mouth. Invieta engineers and designers set about refining them continually, adapting to new forms while improving the performance and heating power of their stoves.

This involves research into combustion: the type of fuel, optimisation of air circuits, analysis of emitted gases, study of their residues and further technological innovations (post-combustion, Air-Control, hybrid log and pellet stoves).

The advanced management of heat was born in our foundry, with cast-iron's outstanding properties: excellent thermal conductivity, remarkable inertia. It will hold and distribute heat radiantly and consistently. It withstands extreme temperatures and heat distortion. And last, but certainly not least: our stoves are 100% recyclable.

**For Invieta,  
design is only  
meaningful if it is  
accessible to the  
greatest number  
of people.**

This has been our vocation for decades. Invieta is committed every day to making this dream possible, so that everyone can afford the best in design and performance. With this philosophy, Invieta Group has become one of the first European manufacturers.

Whatever your budget may be, you will find an INVICTA stove with great design and high performance, that will bring you enjoyment everyday.

# CHOOSE your fuel wisely

You have decided to purchase a wood burner that combines affordability, environmental aspects and performance. But, the question remains «which fuel, and therefore, which stove, best meets your heating needs, logs or pellets?» Here is a comparison of the two families of stoves to help you choose the most suitable.

## Pellet stoves: performance and practicality

### □ Ambience

With their large capacity hoppers, pellet stoves do not require regular supply. In addition, they are programmable and certain models are even remotely controllable.

### □ Constant comfort

Simple to use, they produce a soft and constant heat over a long period, without any effort on your part to keep the flame burning. Pellet stove technology combines efficiency and practicality, bringing you freedom and flexibility.

### □ Fuel quality

Pellets are composed of sawdust and wood shavings make an excellent fuel. With their high energy performance, they produce an efficient and comfortable heat.

### □ High efficiency

By achieving over 90% efficiency, pellet stoves generally outperform traditional log systems. They have been awarded the French efficiency label 'Flamme Verte'. Their ambience is also superior. Some Invicta models, with a 21 kg reserve capacity, allow you to enjoy the heat for up to 30 hours, without refilling.

### □ Higher initial price and running costs

The initial investment is higher for a pellet stove. In addition, pellet fuel is more expensive than wood logs.

# Wood-burning stoves: economy, aesthetics and user-friendliness

## □ Ambience

True family favourites, wood burning stoves continue to seduce thanks to the sublime spectacle of fire they offer to your eyes. A contemporary object of design and pleasure, Invicta wood-burners, inset stoves and cassette stoves fit into any type of interior, and are available in a variety of shapes for an ever-warming atmosphere. Silent, the woodburners and inset stoves work by natural convection, letting you enjoy the crackling sound of the fire.

## □ Competitive price

Wood burning stoves logs as fuel, which is cheaper as it is more widespread and available than pellets. In terms of cost per use, they are therefore the most competitive on the market. Meeting the requirements of the 'Flamme Verte' label, wood burning stoves guarantee a quality energy efficiency of up to 80%. It should be noted that these appliances diffuse heat quickly and do not require electricity to operate.

## □ A variety of log sizes

Depending on their dimensions, the Invicta wood-burning stoves can accommodate different log lengths from 25 to 80 cm. However, for optimum performance, it is best to use smaller logs. Two 25 cm logs will have a higher calorific value than a 50 cm log.

## □ Autonomy

Unlike pellet stoves, their autonomy is limited to a few hours without human intervention. There is a «prolonged combustion» or «continuous fire» mode that allows the appliance to be easily restarted after several hours.

## □ Authenticity

If you are looking for a unique and intense experience, the log stove is for you. As long as you don't mind rekindling the flame from time to time!

To sum up...	LOGS	PELLETS

# INVICTA HAS A SOLUTION FOR THE INDECISIVE!

Become the master of fire by choosing both fuels! Invicta offers you a range of products that combine the advantages of both fuels: hybrid woodburners (AKIMIX, CAROLO MIX and ARATOS PLUG-IN Hybrid). With a pellet autonomy of 8 to 27 hours and a burning area that can accommodate logs up to 40 cm, you will be free to choose between an autonomous heating mode and the conviviality of a wood fire.

# CHOOSE your Invicta appliance wisely

## 1 The Design

Contemporary, vintage, rectangular, oval, original, traditional, anthracite, ivory or bright red enamel... Choosing an Invicta wood-burning appliance is, above all, a matter of love at first sight. One thing is certain; this decorative element will not go unnoticed in your living room. So, let your eyes guide you, and your 'interior designer' soul reveal itself!

## 2 Performance

Invicta stoves, inset stoves and cassette stoves offer a wide range of thermal performance. In this catalogue, we have focused on the heating surface, the optimum output and the power range. These features will help you to make your choice of your ideal stove. The 7-star Flamme Verte rating will guide you towards the most efficient and environmentally friendly stoves.

## 3 Sizing and installation

A good wood burning appliance is, above all, a woodburner, inset stove or cassette stove perfectly adapted to your needs. Don't hesitate to call on a professional stove installer. He will help you to define the ideal product according to the heating volume, insulation and configuration of your home... He will determine the ideal location according to the flue pipe, the size of the appliance and the safety distances to be respected.

## 4 Price

Price is of course an important selection factor. When you set your budget, remember to take into account any government subsidies you may receive. And don't forget, an Invicta wood-burning stove doesn't change every 5 or 10 years, it's, above all, a long-term investment.

# TECHNICAL FEATURES

## POST COMBUSTION

### Post-combustion system

Injection of preheated air into the combustion chamber. The additional air supply from the rear allows the destruction of hydrocarbons at high temperatures, thus giving a complete combustion, resulting in reduced emissions.

## SILENT natural convection

## FULL AUTO

### Silent appliance

Appliance works by natural convection, without fan noise

### Full Auto

Fully automatic and programmable appliance: automatic switching on and off, temperature regulation by thermostat.

## DIRECT AIR-SUPPLY AIR-TIGHT

## DIRECT AIR-SUPPLY

## AIR CONTROL

## DUCTABLE

### Airtight and/or able to have an external air supply connection

**The fresh air supply is centralised at the connection duct:**

- no air intake from the room.
- It is possible to connect the stove directly to the outside air supply or crawl-space.

### Air Control

Centralised manual adjustment of air distribution with single control:

- simple and balanced management of whole air distribution: primary, secondary and post-combustion
- better control of the fire pace : mini, normal and maximum
- control of wood-consumption
- cleaner, more efficient combustion
- a more even secondary air flow to keep the glass clean,
- a total interruption of the air flow in the event of a prolonged stoppage of the unit.

### Ductable

Some of the warm air from the stove can be ducted to heat other rooms

## 100% CAST IRON

## Cast IRON-CLAD Interior

## VERMICULITE Coating

## CAST IRON STEEL HOUSING

### Cast iron, the ideal material for heating

Cast iron, the traditional material of radiator and wood burner manufacturers, offers many ideal properties for heating:

- excellent thermal conductivity, a source of gentle heat,
- high inertia which stores heat and gradually releases it. Most inset stoves and many wood stoves in the Invicta range are 100% cast iron. The heating elements of the cassette stoves are made of cast iron, but covered with a steel fairing.
- Its durability and resistance to thermal distortion.
- Its excellent flowability (fluidity of the alloy), which gives the finished product a "peach skin" or velvety feel that's almost silky. Invicta's mastery of cast iron as a material allows us to offer many original, designer models.

### Connected devices that can be remotely controlled

Equipped as an option, Invicta Plug-IN Auto pellet stoves can be remotely controlled via Wi-Fi. A room thermostat can also be connected to the terminal provided for this purpose on the electronic board of the appliance.

# TAKE FULL ADVANTAGE of your stove

## 1 Use good quality fuel

Whether you use logs or pellets, you won't get the most out of your stove without a quality fuel. If it is unsuitable or of poor quality, the fuel will be the primary cause of issues with your appliance - reduced energy performance and more outside air pollution.

### Logs

#### Suitable wood species

There are two main families of wood classified according to their density:

- > The hardwoods (oak, beech, ash, hornbeam, alder, maple, elm, walnut, fruit trees...)
- > The softwoods (spruce, fir, pine, larch) and soft deciduous (poplar, willow, birch, linden...)

Harder, denser hardwood logs with a higher calorific value are the most recommended for domestic stoves, with the exception of the chestnut log, which splits whilst burning.

Tender hardwoods and softwoods burn too quickly. Softwoods can also clog the flue and the appliance itself. For a brighter flame or to restart combustion, use lighter woods, such as poplar or willow, which burn faster.

#### Dry wood

The moisture content of the wood is an essential factor. Dry, ready-to-use wood (less than 20% moisture content in relation to the gross weight) and freshly cut wood (45% moisture content in relation to the gross weight), the energy released is halved! The more water the wood contains, the more energy it needs to evaporate and the less heat it produces.

Freshly cut firewood, packaged in stacks, should be stored for a minimum of two years for optimal combustion. Cut, split and stored under shelter in a well ventilated area, the wood dries faster. When improperly stored, wood deteriorates quickly.

### Pellets

Pellets are produced by simple compression of sawdust, without chemical additives. Ultra-compact, they allow high yields and high autonomy. Easy to transport, store and use, they are suitable for all housing types. As with logs, pellets must be stored in a dry space. Their humidity must be less than 10%. They are usually sold in bags of 15 kg.

#### TIP

Split the wood before storing it, this helps it to dry. In addition, small logs emit fewer particles than large ones.

## 2 Master lighting the fire!

Before starting your fire, make sure the fresh air intake near the appliance is not blocked. Empty the ash pan, open the air intake dampers. Recent studies have identified a reverse ignition process that can greatly reduce the emission of fine particles. To do this, first place the thickest logs underneath and then place smaller logs above. Finish with small pieces of dry wood (kindling) and a firelighter. Check the draw and the air intake dampers before lighting the firelighter, then close the door.

### TIP

Wait at least 10 minutes before reducing the air supply.

## 3 Control the draw correctly

An optimised draught saves fuel and reduces pollution. With a weak draught fuel will not burn easily, resulting in insufficient heating and a risk of smoke backflow. The stove and the chimney may become clogged, causing greater pollution. With too much draught, combustion becomes too fast and the gas temperature too high. You waste energy and use too much wood. The pressure in the flue system must be between 6 and 12 Pascals. This measurement is verified using a pressure gauge. A damper is necessary in almost all cases to regulate the draw to the recommended values. Depending on your appliance, you will have various settings that allow you to optimize the draught. For more information, see the operating instructions for your model.

How to tell if your settings are correct?

- > Each batch of wood should light when you place it in the appliance and keep burning.
- > The stove must not operate without blaze or you may clog the appliance and release noxious fumes into the environment.

### TIP

The power of a stove, fireplace or insert depends on the amount of wood and the frequency of loading. The optimal power of a wood burning appliance, expressed in kW corresponds to its wood consumption in kg every 3 hours. Example: optimal power of 12 kW equates to a consumption of 4 kg of wood per hour.

## 4 Maintaining your appliance

### Use the services of qualified professionals.

A well maintained appliance will save fuel, deliver better wood combustion and have better environmental performance. Your appliance and your installation will also be preserved for years to come.

### Yearly maintenance is mandatory.

A complete inspection of your appliance and its installation must be performed annually by a qualified person. A maintenance certificate, that you should keep for 2 years, will be given.

### The chimney must be swept twice per year.

Call a qualified professional to carry out two mechanical chimney sweepings of the flue system. One of them must also be done during the heating period. Ideally, the chimney sweeping must be done from the top. Remember to ask for a sweeping certificate. Warning! Chemical sweeping is not a replacement for a mechanical sweeping.

### Regularly clean your wood burning stove.

A wood burning stove requires a few simple tasks that you can do yourself:

**Ashes:** an excess of ashes can block the air supply to your fire. For the best performance from your stove, remember to empty the ash pan regularly and to dust the fire grate.

**The glass:** to enjoy the charm of a roaring fire, regularly clean the glass! Dirty glass shows non-optimised combustion. A very hot burn will also clean the glass through the pyrolysis effect.

### TIP

It's better to clean the glass when it's warm – it's more effective and quick. Moisten newspaper and tap it in some cold ashes. Rub the glass and repeat several times to remove all traces. Rinse with a damp sponge.

**The seals:** also remember to regularly check the condition of the door and glass seals.

**Pellet stoves** require more regular maintenance, see the instructions manual.

# NEW CONCEPT

## Invicta revolutionises the design of pellet stoves with its Plug-IN technology

### Innovative technology and new design

After refreshing the old woodburner design back in the early 2000s, Invicta spent several years establishing itself in the pellet stove market. Thanks to a technical collaboration with our Italian partner Caminetti Montegrappa, a pellet stove leader in Italy and Europe, and our designer Bernard Dequet, Invicta has risen to the challenge. We have completely revolutionized pellet stoves.

### Cast iron woodburners with a fabulous new look

By putting the stoves' technical workings into an ingenious wall reservoir, Invicta has freed itself from the stranglehold of the "pellet box." We now offer several unique models that plug into the hopper. These fabulous-looking products come in the same shapes that have made Invicta so successful, as well as brand new looks. Plug-IN is truly a new technology, paving the way for the next generation of pellet stoves.

### Simple, ingenious cast iron woodburners for daily use

Plug-IN stoves offer longer burn times (up to 30 hours) thanks high capacity wall reservoirs (21 kg). The reservoirs provide an additional technical feature; they also function as screens, reducing the safety distance required from combustible materials. They can be placed directly against the wall. The wall reservoir also conceals the tank-filling tool. Temperature can be regulated using the control panel. Our Plug-IN stoves provide gentle, consistent heat.

### Quiet, radiant cast-iron stoves

Our Plug-IN stoves work silently:

- with natural convection, not a blower. In addition, the cast iron fire-box, a simple shell, radiates heat into the room, spreading a wonderful feeling of warmth.
- with natural draft, not a smoke extractor fan (Aratos Hybrid).
- A smoke extractor fan is included in all Auto models.

### Separate hopper

Large capacity 21 kg  
and wall protection

### Invicta cast-iron stoves

**Unique. Simple. Design**

## The Plug-IN technology

- Technical parts and the tank are separated from the heating body and hidden in the wall panel.
- Many stylish and designer cast iron woodburners can be connected to the wall unit.
- Several types of stoves can be connected: pellet or hybrid (logs + pellets) with manual or auto on/off.
- The Plug-IN stoves operate by natural convection, without the need for a blower, and are therefore silent. The cast iron woodburners radiate and spread a wonderful feeling of warmth.
- The cast iron woodburners radiate wonderful feeling of warmth.
- Optimal user comfort :
  - Temperature can be regulated using the control panel. Our Plug-IN stoves provide gentle, consistent heat.
  - Plug-IN stoves offer longer burn times (up to 30 hours) thanks to high capacity wall reservoirs (21 kg).
  - The reservoirs provide an additional technical feature. They also function as screens, reducing the safety distance required from combustible materials. They can be leaned right up against the wall.
  - An accessory for filling the tank is hidden in the wall panel.

## Woodburners

With excellent thermal conductivity and high inertia: cast iron is the ideal material for heating appliances. The heat developed by the combustion of the wood is stored by the cast iron, and released to the home in the best possible manner thanks to the regularity of emission. Its excellent castability gives it that famous peach skin or velvety finish. This material is 100% recyclable. Invicta cast iron woodburners are decorative objects in their own right, and are equally appropriate in a rustic or contemporary interior. Finally, in addition to their sturdy appearance, they are incredibly durable.

# OVATIO

Ready for the show? You can't help but be impressed by the outstanding heating capacity and energy efficiency of this stove - not to mention its unique and beautiful design. Standing ovation!

## Cassette stoves

A cassette stove is a wood burner often installed in an existing fireplace : your open fire installation will be transformed into a closed fireplace, thanks to this efficient, environmentally-friendly system.

This simple change will drastically improve performance and reduce the pollution emissions into the atmosphere.

The cassette stove, with a streamlined, cast-iron heating element, is equipped with a double-walled lining to enable ambient air to flow around the cassette stove and transfer heat.

The cool air is heated in the unit and then expelled through the top outlets. The cassette stove can be connected to other rooms in the house via additional warm air outlets and distribute the warm air to other parts of the home.

## 700 RIGHT GLASS CORNER Flue-value

The corner hearth allows the viewer to see the fire from a variety of angles. Choose right- or left-oriented glass based on the configuration of your room.

H 685 x W 652 x D 443 mm - Flue diameter ext. 200 mm. Flue exit : Top. (Comparative tables : p97)

Heating surface	65 – 145 m <sup>2</sup>
Optimal heat output	12 kW
Wood consumption	4 kg wood / h
Heat output adjustment	8 – 18 kW
Maximum log length	50 cm
Colour choices	● P626472

## 700 LEFT GLASS CORNER Flue-value

The large glass surface of this corner hearth provides the perfect ambiance for daydreaming by the fire.

H 685 x W 652 x D 443 mm - Flue diameter ext. 200 mm. Flue exit : Top. (Comparative tables : p97)

Heating surface	65 – 145 m <sup>2</sup>
Optimal heat output	12 kW
Wood consumption	4 kg wood / h
Heat output adjustment	8 – 18 kW
Maximum log length	50 cm
Colour choices	● P626473
